

Catcher Technology Co., Ltd.
Water Resource Management Policy and Commitment

Commitment to Improving Water Resource Efficiency

To promote sustainable business development and strengthen environmental and natural resource governance, the Company, in accordance with Article 15 of the Sustainable Development Best Practice Principles approved by the Board of Directors on March 3, 2026, shall properly and sustainably manage water resources and establish relevant management measures to continuously improve water use efficiency. The Company shall also establish and enhance environmental protection and treatment facilities, actively prevent and control water, air, and soil pollution, and strive to minimize any adverse impacts of its operations on human health and the environment. The Company adopts the best available pollution prevention, control technologies, and management practices to achieve environmental protection and sustainable development objectives.

Scope of Application

This Policy applies to all operational activities of the Company and its subsidiaries. All employees, suppliers, contractors, business partners, and other stakeholders are required to comply with its requirements. Through collaboration across the value chain, the Company seeks to enhance water resource efficiency and strengthen wastewater management and pollution prevention measures.

Water Efficiency Enhancement and Wastewater Management Policy

The Company adheres to the “Sustainable Development Best Practice Principles” and the ISO 14001 Environmental Management System framework, continuously enhancing its water resource management mechanisms. The core objectives are to reduce overall water consumption and improve water use efficiency. Through the implementation of various water-saving and optimization measures, including production process improvements, enhancement of equipment water efficiency, and the establishment of wastewater recycling and reuse systems, the Company comprehensively strengthens water resource management performance.

1. The Company promotes water conservation initiatives and increases the proportion of recycled water usage to effectively reduce reliance on third-party freshwater sources, thereby continuously improving water use efficiency and resource utilization.
2. The Company fully implements wastewater management systems and maintains comprehensive wastewater treatment facilities to ensure that effluent quality complies with relevant regulatory requirements. It also strives to achieve performance exceeding local statutory standards, thereby reducing water pollution risks and environmental impacts.
3. The Company works together with employees, shareholders, suppliers, partners, and other stakeholders to continuously promote water conservation and water resource protection. Through training, communication, and collaboration, the Company jointly fulfills its commitment to sustainable water resource management.
